MedLink · Version 1

Prototype status report

Version 1 follows a fourth-year clinical clerk through one fictional Pediatrics rotation. A duty block counts toward progress after the assigned supervisor validates it.

Open the prototype · Open the questionnaire

Try one complete workflow

1. Open **Student** and submit an available scheduled duty block. The total stays at 8 of 32 hours in a fresh demo.
2. Switch to **Supervisor** and validate the pending log.
3. Return to **Student** or open **Department chair**. Both show 16 of 32 hours and the validation record.

What Version 1 covers

Area	Status	What to expect
Rotation submission	**Works**	The clerk chooses a scheduled duty block. Each block can be logged once.
Validation and progress	**Works**	The supervisor validates a pending log. Student and chair see credited hours, supervisor name and validation time.
Questionnaire	**Ready**	Live sending requires the private send code. The form accepts text and choices, and shows a receipt after a successful send.
Accounts and sign-off	**Simulated**	Tap-to-switch roles use fictional identities. Validation records a demo action. Real identity checks and digital signatures are open.
Rotation rules	**Simulated**	One department, one clerk, fixed duty blocks and a 32-hour demo target. The ward multiplier stays at 1.0.
Expanded workflow	**Open**	Corrections and resubmission, competency sign-offs, department rosters, configurable rules and institutional reporting.
Broader Book 1 scope	**Open**	Curriculum and assessment tools, wellness and grading, live ward inputs, and integrations with other systems.

What we need from the doctor

Use the questionnaire to confirm who validates hours, how duty blocks should be entered, what the chair needs to see, and which feature to build next. Use fictional examples in feedback.
